

Installation folder - sceneries

check your FSX\addon scenery folder.
You must have these 3 folders

Vietnam War Project
Vietnam War Project Under Fire
Vietnam War project Fictive LZ

and in these folders : scenery and texture

i.e. My scenery folder content

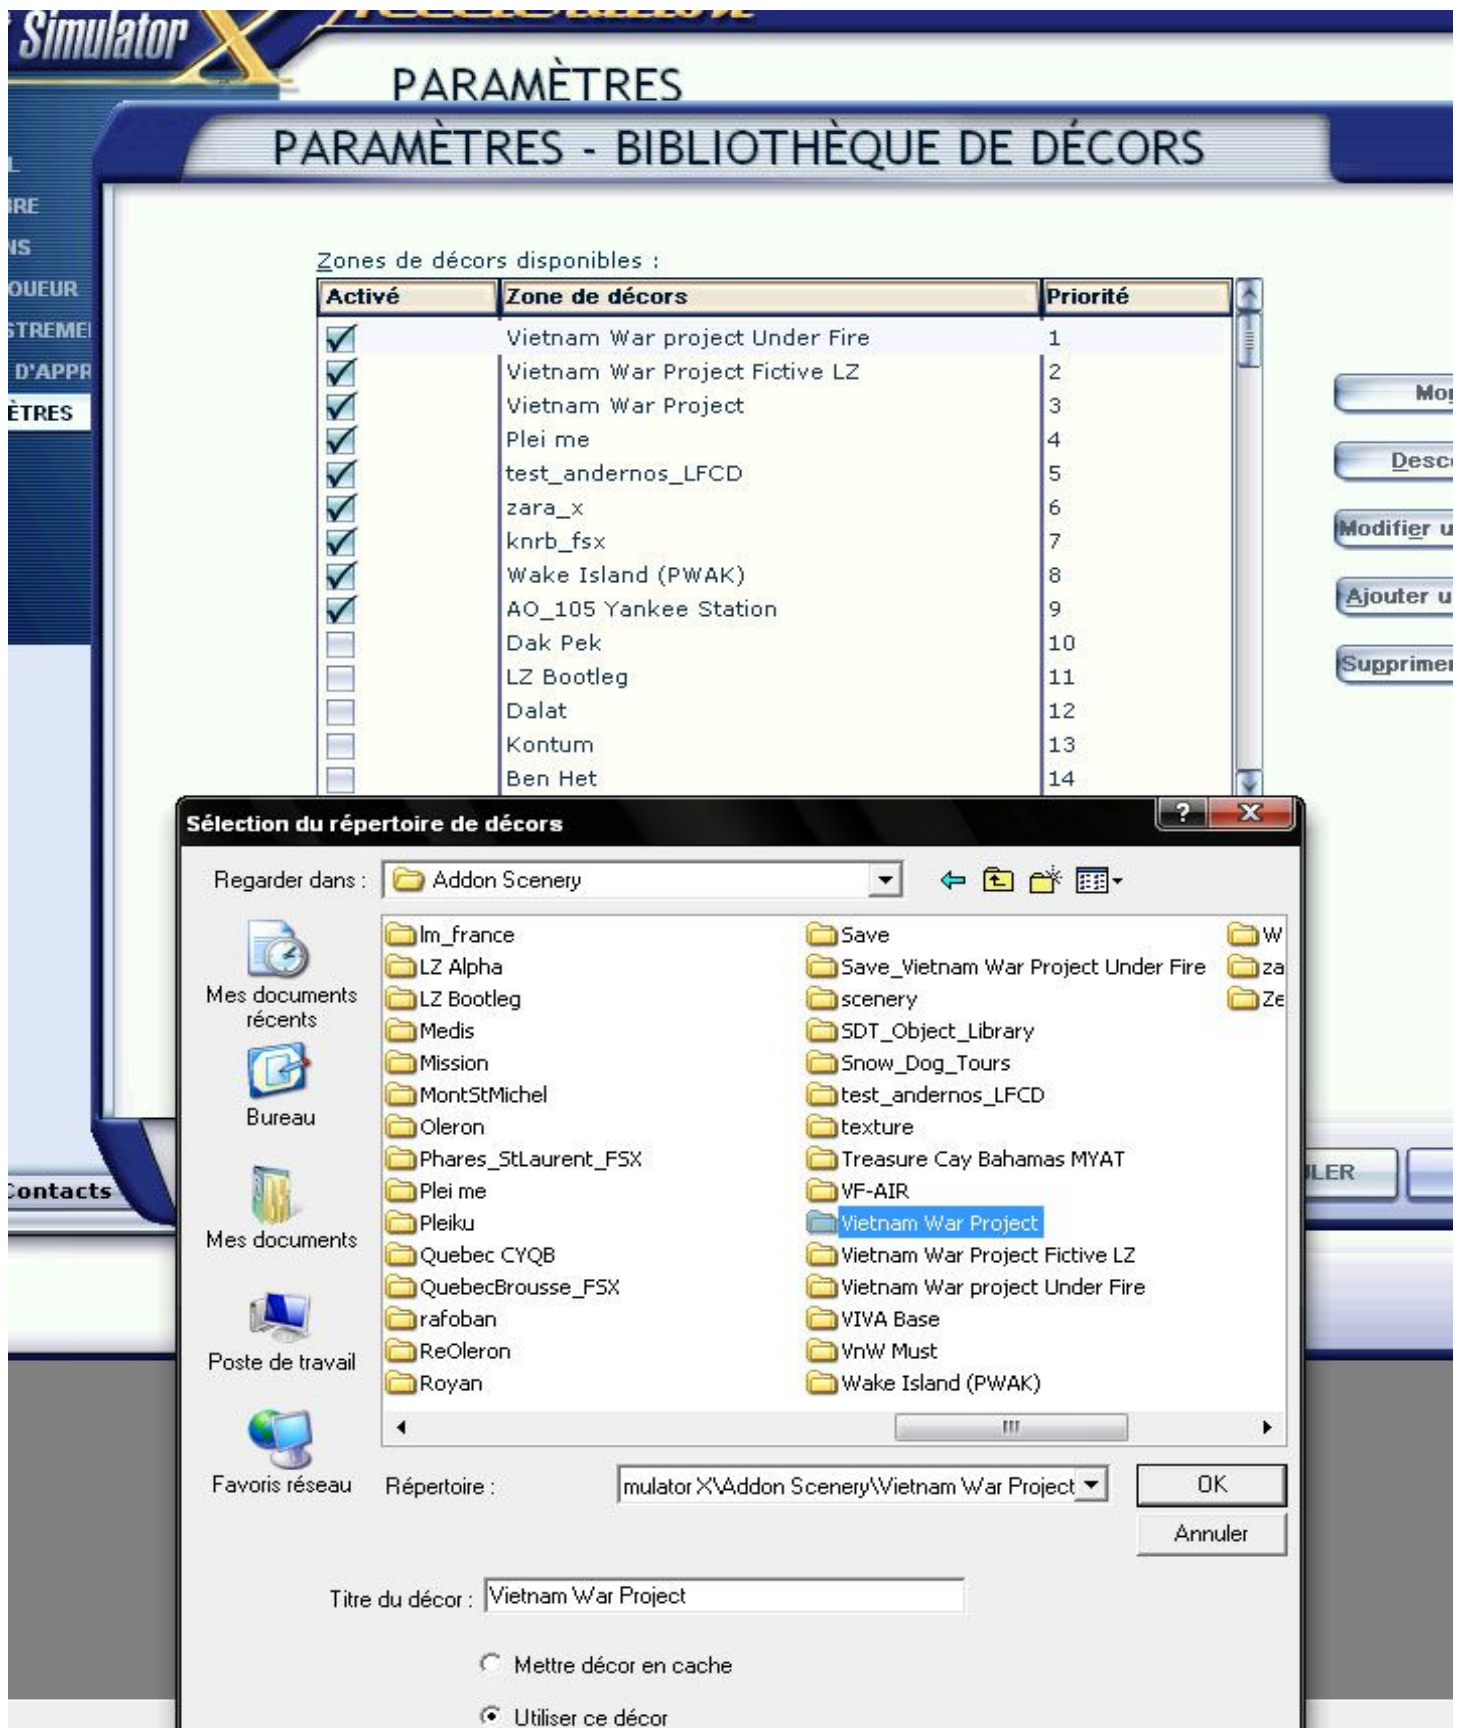

If OK, we can activate the 3 sceneries folders.

I'm sorry, this is french version of FSX.

Upon starting FSX, go to **Settings > Addon Scenery**, and browse to the location of the folder "Vietnam war project". Click on it and press OK (don't open the folder) to enable the scenery - it should then appear at the top of your Addon Scenery list.

Repeat for the 2 others folders.

Close FSX and restart.

The Under Fire scenery must be at the top, above the 2 others.
